Asia University (AU), one of the world's best institutions of higher education, puts great efforts in the development of academic research, teaching and other affairs in the past decade, and has achieved many great accomplishments . The College of Nursing builds up its strength in three specialty areas : the international nursing program, the clinical care program, and the aging long-term care program. Our 2022 online summer program is designed for students of AU partner universities who want to deepen their understanding in interdisciplinary global health issues. Come to enhance your career competence and give yourself an opportunity to meet and interact with international students around the globe.

About the Program

This program provides an overview of current global health challenges drawing on the insights of several nursing specialties, including racism and health, community health nursing, nursing workforce, long-term care, mental health, hospice nursing, and complementary alternative nursing. You will learn how to address worldwide health challenges. The academic curriculum builds upon current issues and future trends to help students understand the underlying forces which lead to health disparities worldwide, such as coronavirus control strategies in various countries, or long-term care developments in the world. After completing the courses, you may continue to graduate school or professional programs in nursing studies, clinical nursing, long-term care and nursing administration.

The Program Features

During the two-week online study, you will attend classes for six to seven hours a day and participate in in-class and group project discussions with different professors and international students. A group of professors from several countries will share their different nursing philosophy to expand your knowledge of each nation's health management systems. The topics of this program are very diverse and international. If you make enough efforts in this program, you will make a difference to your future life.

Artificial intelligence (AI) that can learn, reason, plan, perceive, or process natural language will take advantage of business risk management and raise up to predicting behavior reaction accurately. Applications based on AI are already visible in business administration management, finance, information accounting, leisure and recreations. This program is a customized summer program designed in particular for students of overseas partner universities. The program is very helpful to students who are eager to develop knowledge and skills of AI application in management.

About the Program

AI application in management can enhance various facets of effectively managing a business. The program can provide you with a variety of professional courses. You will learn, for example, AI modeling and simulation techniques with R language and Python, classification, survival prediction, number recognition, big data analysis, credit and lending, payments, investment analytics. After completing this program, you'll gain tools in improving from customer services to finding business patterns, effective data management, analytics, decision-making effectiveness, cross cultural awareness and develop the ability to reach beyond the organization for insights.

The Program Features

AI application in management will likely play a more significant role in the way that companies operate as the software continues to advance and moves towards the forefront of the industry. AI application in management can work more efficiently through these features and complete them more quickly and effectively. This is achieved by analyzing big data to obtain a better understanding of their behaviors and preferences. For example, trading investors currently see new financial service using different types of AI application for lender and borrower through Fintech on websites. These have become enormously helpful as they lead traders to the correct credit and lending markets. With our teachers' engaging and inspiring instruction, students can benefit from these teachings. Through a series of training lessons, your AI knowledge and skills in management will enable you to use big data and then to do decision analysis through real-time and up-to-date data gathering, forecasting, and trends.
